

# The PROVALE<sup>®</sup> cup

Improving Patient Hydration Through “Small Swallows<sup>®</sup>”

The Provale<sup>®</sup> Cups are specifically designed for patients and residents with dysphagia. These Cups deliver “small swallows<sup>®</sup>” of thin liquids with every normal drinking motion. This may promote safer swallowing and may allow the user more independence by putting hydration and nutrition within their reach. The Provale Cup design was developed with the input of over 500 healthcare professionals.

- For delivery of “small sips” of water, nutritional supplements and other thin liquids
- Delivers either 5cc or 10cc small sip with every normal drinking motion
- May help eliminate the need for pre-thickened liquids with some patients and residents
- May give patients and residents more independence and lessen caregiver supervision
- Patented anti-suck mechanism prevents over-delivery of fluids for ease and safety of swallowing
- Good nose clearance to minimize head tilt
- Easy to disassemble for cleaning (refer to the video at our website)
- The Transparent Outer Cup model allows observance of the liquid level
- Institutional dishwasher safe
- Place one or two easy-grip handles on the cup or use no handle.
